Aardvark Polymers ~ High Performance Coating Resins

Aardvark Polymers offers a wide range of polymer coating resins for high performance applications such as:

- UV protection
- Release surfaces
- Corrosion resistance
- Antimicrobial properties
- Temperature resistance
- Scratch and wear resistance
- Aggressive chemical resistance
- Static dissipative and conductive properties

Aardvark Polymers provides custom compounds of engineering and high performance polymers suited to your specific application. The base resins that we employ in formulating our coatings with include:

- Nylons PA
- Acetals POM
- polyethylene PE
- Polyetherimide PEI
- Polyphenyl sulfone PSU
- Polyphenylene sulfide PPS
- Polyetheretherketone PEEK
- Polytetrafluorethylene PTFE
- Polyvinylidene fluoride PVDF

Aardvark Polymers would be pleased to consider the specific requirements of your coating applications. Aardvark can develop a coating for all of your most demanding applications.

Aardvark coating resins may be applied with conventional methods including electrostatic powder coating, polymer/flame spray systems, and fluidized beds.

Aardvark Polymers can formulate and create specialty coating resins to meet or exceed your particular specifications. Aardvark can develop processing parameters, including substrate preparations, to assure complete compatibility within your coating matrix.

Aardvark Polymers also offers sampling programs that allow you to evaluate coatings on your actual product under a series of adverse conditions. Aardvark's in house coating and development capabilities make it possible for you to be completely satisfied before moving on to production quantities.
